Contents

Preface	xi
Acknowledgments	xiii
1. WIND EROSION AND WIND-EROSION RESEARCH	1
1. Wind-erosion Phenomenon	1
2. Integrated Wind-erosion Modelling	8
2. PATTERNS OF WIND EROSION IN THE WORLD	13
1. Climatic Background for Wind Erosion	14
2. Atmospheric Systems which Generate Dust Storms	18
2.1 Cold Fronts	19
2.2 Squall Lines	21
3. Global Wind-erosion Patterns	24
4. Major Wind-erosion Regions	29
4.1 Wind Erosion in the Sahara	29
4.2 Wind Erosion in the Middle East and Central Asia	32
4.3 Wind Erosion in China	35
4.4 Wind Erosion in the United States	37
4.5 Wind Erosion in Australia	37
3. ATMOSPHERIC BOUNDARY-LAYER AND ATMOSPHERIC MODELLING	41
1. Atmospheric Boundary Layer	41
1.1 Basic Features of Different Atmospheric Boundary Layers	42
Convective Boundary Layers	42
Stable Layer	43
2. Governing Equations for Atmospheric Boundary-Layer Flows	46
3. Reynolds Averaging and Turbulent Flux	51
4. Equation System for Mean Flows	54
5. Friction Velocity	55

6.	Equations for Turbulent Fluxes and Variances	59
6.1	Turbulent Dust Flux	59
6.2	Dust Concentration Variance	61
6.3	Turbulent Kinetic Energy	61
6.4	Stability Measures	63
7.	Similarity Theories	65
7.1	Monin-Obukhov Similarity Theory	66
7.2	Mixed-Layer Similarity Theory	69
8.	Simulation of Atmospheric Boundary-Layer Flows	70
9.	Atmospheric Prediction Models	76
4.	LAND-SURFACE MODELLING	83
1.	General Aspects of Land-Surface Schemes	84
2.	Surface Energy Balance	86
3.	Soil Moisture and Soil Temperature	88
4.	Calculation of Surface Fluxes	94
5.	Land-Surface Parameters	99
6.	Examples of Land-Surface Simulation	104
7.	Treatment of Heterogeneous Surfaces	108
	Averaging Surface Properties	108
	PDF Representation	109
	Explicit Subgrid and Mosaic Methods	109
	Spatial Variation of Atmospheric Data	111
5.	BASIC CONCEPTS OF WIND EROSION	113
1.	Soil-Particle Characteristics	113
2.	Aerodynamic Forces on an Airborne Particle	120
3.	Particle Terminal Velocity	125
4.	Modes of Particle Motion	126
	Suspension	127
	Saltation	128
	Creep	129
5.	Threshold Friction Velocity for Sand Particles	130
5.1	The Bagnold Scheme	131
5.2	The Greeley-Iversen Scheme	134
5.3	Modified Greeley-Iversen Scheme	136
6.	Threshold Friction Velocity for Dust Particles	139
6.1	The Relative Importance of Forces	139
	Van der Waals Forces	139
	Electrostatic Forces	140
	Capillary Forces	140
	Other Forces	141
6.2	The Threshold Friction Velocity as a Stochastic Variable	142
6.	THE DYNAMICS AND MODELLING OF SALTATION	145
1.	Uniform Saltation	146

2.	Non-Uniform Saltation	149
3.	Streamwise Saltation Flux	151
4.	The Bagnold Saltation Model	151
5.	The Owen Saltation Model	153
6.	The Raupach Model for Saltation Roughness Length	158
7.	Other Sand-Transport Equations	164
8.	Evolution of Streamwise Sand Transport with Distance	167
9.	Splash Entrainment	169
9.1	Wind-tunnel Observations of Splash Entrainment	170
9.2	Numerical Simulations of Splash Entrainment	172
10.	Numerical Modelling of Saltation	179
10.1	A Simple Flow Model	179
10.2	Large-Eddy Simulation Model	180
10.3	The Particle Motion	182
10.4	Aerodynamic Entrainment	183
10.5	Splash Entrainment	185
11.	Understanding of Saltation from Numerical Simulation	188
11.1	Importance of Splash Entrainment	188
11.2	Particle-momentum Flux, Saltation Flux and Roughness Length	192
7.	DUST EMISSION	195
1.	Vertical Dust Flux and Friction Velocity	196
2.	The Mechanism for Dust Emission	199
3.	The Energy-based Dust-emission Model	202
4.	The Volume-Removal Based Dust-emission Model	208
4.1	The Equations of Motion for Ploughing Particles and Volume Removal	212
4.2	The Vertical Dust Flux	214
4.3	Soil-drag Force and Uncertainties	220
5.	Comparison of Dust-emission Models	222
6.	Concluding Remarks	222
8.	DUST TRANSPORT AND DEPOSITION	225
1.	The Evidence of Dust Transport and Deposition	225
2.	The Lagrangian Dust-transport Model	229
3.	The Eulerian Dust-transport Model	234
4.	The Vertical Diffusion of Dust Particles	240
4.1	Particle Eddy Diffusivity	241
4.2	Convective Transport	254
5.	Dry Deposition	257
5.1	The Two-layer Dry-deposition Model	258
5.2	Deposition Over Vegetation Canopies	263
5.3	The Single-layer Dry-deposition Model	268
6.	Wet Deposition	271

9. INTEGRATED WIND-EROSION

MODELLING	279
1. Introduction	279
2. Sand Drift and Dust Emission of Soils with Multiple Particle Sizes	281
3. Threshold Friction Velocity for Natural Surfaces	284
3.1 Drag Partitioning: Approach I	285
Ground Stress	287
Stress on the Roughness Elements	288
Total Stress	289
Stress Partition	289
3.2 Drag Partitioning: Approach II	291
3.3 Double-Drag Partitioning	293
3.4 Soil Moisture	294
3.5 Chemical Binding and Crust	299
4. System Structure and Land-surface Parameters	300
4.1 Soil Particle-size Distribution	302
4.2 Soil-Binding Strength	307
4.3 Frontal-area Index and Roughness Length	309
- Frontal-area Index and Roughness Length of Sparse Vegetation	309
Frontal-Area Index and Roughness Length of Soil Aggregates	311
4.4 Soil Moisture	311
5. Manipulation of GIS Data	311
6. Examples of Integrated Wind-erosion Modelling	315
6.1 Wind-erosion Time Series	315
6.2 Wind-erosion Prediction On Broad Scales	316

10. SAND DUNES,

DYNAMICS AND MODELLING	325
1. Classification of Sand Dunes	326
2. Basic Features of Flow Over a Sand Dune	333
3. Sand Transport	337
4. Computational Simulation	341
4.1 Flow-model Implementation: A Non-hydrostatic Model	343
4.2 Flow-model Implementation: A Large-eddy Simulation Model	345
4.3 Computation of Erosion and Deposition Rates	348

11. TECHNIQUES FOR WIND-EROSION

MEASUREMENTS	351
1. Wind-tunnel Measurements	351
2. Samplers	353
2.1 Passive Samplers	354
2.2 Active Samplers	357
2.3 Fast-responding Samplers	357

3.	Field Measurements	359
4.	Particle-size Analysis	361
4.1	Dry Sieving	363
4.2	The Settling Tube and Elutriator	363
4.3	Electro-sensing Methods	366
4.4	Laser Granulometry	367
12.	CONCLUDING REMARKS	369
	Index	391
